WHY DINGO?

Dingo remains AUSSIE OWNED and AUSSIE MADE for AUSTRALIAN CONDITIONS. In an industry that has seen foreign imitators come and go as they compromise on quality for price, Dingo has maintained its ongoing commitment to quality; because we understand better than anyone what our Dingo owners need to put their machines through.

HYDRAULIC PERFORMANCE

Dingo is a 'hydraulic power plant on wheels'. Designed to run high pressure and high flow attachments. Ozzy Dingo models have the best hydraulic power in their class, better than most larger skid steers. When it comes to hydraulics, the engine is only a very small player, It is the flow and pressure that is available to the attachment that makes the difference. Nothing beats an OZZY DINGO

SIMPLE AND SOLID LINKAGE SYSTEM

Back in the early 90's Dingo removed the complicated selflevelling system from the design. This reduced the mount plate assembly to 3 joints, (previously 7) reducing the maintenance required as well as the wear and slop associated with the self-levelling system. Self-levellers were designed for large loaders where the operator's vision of the load was often obstructed by the canopy. Not a problem on a Dingo.

LIFT MORE WEIGHT

With excellent weight distribution the weight is down low, the Dingo can lift the heavier loads, enabling bigger buckets to get the job done faster and safer.

CLEANABLE HYDRAULIC TANK

Oil contamination is the greatest enemy of all hydraulic machines. The lid of the Dingo hydraulic tank can be removed to allow thorough cleaning, should contamination occur. This is a "must have" that others choose to ignore.

POWDER COATING

The best machine needs the best finish. Dingos are sand blasted, primed, powder coated and then baked. This produces a harder wearing and a longer lasting finish.

**THREE NEW MODELS TO
CHOOSE FROM, ALL
FITTED WITH THE DINGO
MULTI PUMP SYSTEM TO
PROVIDE EFFICIENT
HYDRAULIC POWER**

THIS ALLOWS THE DINGO TO:

- Power both the Dingo and the attachment at the same time without one robbing power from the other.
- Keep the hydraulic oil cooler by only sending the oil to where it needs to go i.e. when trenching the Dingo gets 5% of the oil whilst the trencher gets 95%. This controls the ground speed, maximizes digging power and keeps the oil cool by minimizing the components it has to travel through.
- Give the Dingo up to three drive speeds by the ability to switch the pumps between circuits.
- Infinitely control the division of power between the two circuits to control ground speed (when trenching) and maximize flow to the attachment.
- Have high hydraulic flow and operating pressure.
